

On the basis of his engineering work for us at Enode from 02 2021 until 07 2022, I'm pleased to highly recommend Olav Sundfør for any similar positions.

During this time, he has worked accurately, and efficiently and get along very well with the team. Despite our lack of resources with which to provide full specifications or quick feedback, he showed a great ability to take ownership of the challenges he was presented with and tease out all the implicit details.

Olav has been instrumental in the implementation of Enode's diverse vendor connections that allow customers to link their vehicles to the Enode platform. He writes maintainable Typescript code and shows a strong understanding of the interactions between different components in the system. One of the many qualities of Olav was his eagerness to take on big challenges, lay out a plan, execute and keep stakeholders up to date until delivery. An independent engineer that manages himself and manages upward.

Please feel free to get in touch if you are interested in discussing this work experience further.

Nikolai Heum  
CTO, Enode.io
